

## PERSONAL PARTICULARS

---

Name : LAU CHUN KIT  
Date of Birth : 25<sup>th</sup> NOVEMBER, 1995  
Nationality : Chinese  
Email : [petelauck@gmail.com](mailto:petelauck@gmail.com)  
Mobile : +1 (778) 723-6211  
Github : [chunkitmax \(Petel\\_\) - GitHub](#)  
Website : <https://chunkitmax.github.io/about?s=cv>

## EDUCATION

---

<b>Hong Kong University of Science and Technology (HKUST)</b> BEng in Computer Engineering	<b>Hong Kong</b> Sep 2014 - Sep 2018
<b>Universitat Politècnica de València (UPV)</b> Exchange student in Computer Engineering	<b>Valencia, Spain</b> Feb 2017 - Jun 2017

## HONORS AND AWARDS

---

<b>The 10<sup>th</sup> NXP® Freescale Cup Intelligent Car Competition 2015</b> <b>Merit award</b> <ul style="list-style-type: none"><li>- Designed and built a firmware for Arm® Cortex®-M4 Kinetis K60 MCU to control a full automated car to run on a track</li><li>- Used inductors to sense the magnetic field generated by a single AC powered wire on the middle of the track</li><li>- Applied P controller for turning and PI controller for speed control</li><li>- Designed a control system and algorithm to use the voltage induced by inductors on the car as input to control the car to complete the track with crosses and sharp turns</li><li>- Optimized the firmware and fine-tune the car with my own grapher (Google extension)</li></ul>	<b>Xiamen, China</b> Jul 2015
<b>The 11<sup>th</sup> NXP® Freescale Cup Intelligent Car Competition 2016</b> <b>Second class award</b> <ul style="list-style-type: none"><li>- Designed and built a firmware for Arm® Cortex®-M4 Kinetis K60 MCU to control a two-wheeled full automated car to run on a track</li><li>- Use inductors to sense the magnetic field generated by a single AC powered wire on the middle of the track</li><li>- Designed a control system and algorithm to use the voltage induced by inductors on the car as input to control the car to complete the track with crosses and turns</li><li>- Applied PD controller for angle control using the result from complementary filter on IMU output</li><li>- Implemented Fuzzy Logic PD controller for turning</li><li>- Designed algorithm to control car speed while keeping the inverted pendulum system stable</li><li>- Optimized the firmware and fine-tune the car with my own grapher (Google extension)</li></ul>	<b>Changsha, China</b> Jul 2016
<b>Imagine Cup 2017 by Microsoft Hong Kong Ltd.</b> <b>Best UI Award</b> <ul style="list-style-type: none"><li>- Built a chat-bot system for interview using natural language processing</li><li>- One of Elite 8 teams</li></ul>	<b>Hong Kong</b> May 2017

## EXPERIENCE

---

<b>The Hong Kong University of Science and Technology</b> <b>HKUST Robotics Team Member &amp; Mentor</b> <ul style="list-style-type: none"><li>- Represented HKUST in 2014-2015 National Freescale SmartCar (China)</li><li>- Sub-team leader who collaborates with 15 teammates</li></ul>	<b>Hong Kong</b> Sep 2014 - Jul 2016
---	---

## USting

### Co-founder

- USting is a team made up of passionate and talented students who work towards the continual betterment of the app and the HKUST student community. Mainly provide iOS and Android applications to let HKUST students have easy access to University's basic services
- Major Android developer in early stage

## Hong Kong

Aug 2016

## ARTRO Digital Ltd.

### Freelance Web developer

- Built company websites with React and Node.js

## Hong Kong

Jun 2017 - Apr 2018

## BHL Technology Ltd.

### Python Programmer

- Engineered a system to control robot running on Robot Operating System(ROS)
- Built modules with multiple programming languages (Python, C, Node.js)
- Programmed an embedded application for Cortex-M3 core device to control motors/servos
- Built user interface with Http and WebSocket server for real time monitoring
- Designed and implemented protocol on communication via CAN bus
- Applied ROS SLAM module and Deep Learning models in Computer Vision
- Conducted Hardware testing

## Hong Kong

Aug 2018 – Mar 2019

## SoarStack Tech Solutions Ltd.

### Software Engineer

- Engineered modern highly-available, scalable international commercial platforms for companies with Node.js, React powered by AWS (such as RDS, EC2)
- Efficiently deployed and integrated software and wrote integration / deployment bash scripts, dockerfile and docker compose file
- Designed, built and maintained modules for company internal purchase system with Java, Apache MyFaces and Oracle Database

## Hong Kong

Apr 2019 - Jun 2022

### Freelance Embedded System Engineer

- Analyzed, designed and developed embedded system hardware and software solutions
- Built firmware for MCU with WiFi module to control motors in the product
- Designed a WebSocket server running on the firmware to provide client requested API

## Hong Kong

Nov 2019 - Jun 2022

## SKILLS

---

<b>Languages</b>	Cantonese	(Native)
	English	(Proficient)
	Mandarin	(Proficient)
<b>Programming Languages &amp; Libraries</b>	General-purpose:	C/C++, Python, Java, VisualBasic, VisualBasic.Net(VB.NET), Rust
	Web (Backend):	Node.js, Typescript, PHP
	Web (Frontend):	Javascript, jQuery, CSS, Bootstrap, HTML, React
	Database:	MySQL, MongoDB, InfluxDB, Oracle Database
	Unix:	Bash
	Cloud:	AWS
<b>Hardware Engineering</b>	Other:	Git, OpenCV, Robot Operating System(ROS), Docker, Docker Compose
		Control System Design, Embedded System Design, PCB Design (Hand-on), Soldering, Microcontroller Programming (STM32, STM8, Freescale Kinetis, AVR)
<b>Machine Learning Tools</b>	TensorFlow, Keras, PyTorch
